## In the Claims

Please cancel claims 45-47 and amend the claims as follows (all of the pending claims, whether or not amended, are set forth below for the Examiner's convenience):

48. (Amended) A method for modulating [unresponsiveness by a] T cell responsiveness, comprising contacting a T cell which expresses a cytokine receptor  $\gamma$  chain with an antibody which binds to and transduces a signal via the  $\gamma$  chain such that T cell responsiveness is modulated or (i) contacting a T cell which expresses a cytokine receptor  $\gamma$  chain [and has received a primary activation signal] with an agent which modulates a signal associated with ligation of the cytokine receptor  $\gamma$  chain such that [unresponsiveness by the] T cell responsiveness is modulated, [with the proviso that the agent does not consist of natural interleukin-2] and (ii) detecting whether signal transduction via the cytokine receptor  $\gamma$  chain occurs.

49. (Amended) The method of claim 48, wherein the agent stimulates a signal associated with ligation of the cytokine receptor γ chain, such that [unresponsiveness by the] <u>T cell stimulation occurs</u> [is inhibited].

50 (Amended) The method of claim 49, wherein the T cell has received a primary activation signal [under conditions which normally result in unresponsiveness in a T cell] in the absence of a costimulatory signal.

- 51. (Amended) The method of claim 50, wherein the agent acts extracellularly to stimulate a signal associated with ligation of the cytokine receptor γ chain such that [unresponsiveness by] the T cell is [inhibited] stimulated.
- 52. The method of claim 51, wherein the agent interacts with the cytokine receptor  $\gamma$  chain.

7.

54. The method of claim 52, wherein the agent is an anti-γ chain antibody.

The method of claim 51, wherein the T cell is contacted *in vivo* with the agent

56. (Amended) The method of claim [51] <u>48</u>, further comprising contacting the T cell with both an agent which stimulates a primary activation signal in the T cell [and an agent which stimulates a signal associated with ligation of the cytokine receptor γ chain].

51. The method of claim 56, further comprising contacting the T cell with an agent which stimulates a costimulatory signal in the T cell.

The method of claim 56, wherein the agent which stimulates a primary activation signal in the T cell is an antigen.

(Amended) The method of claim 58, wherein the antigen is a pathogen or portion thereof selected from the group consisting of a virus, a bacteria, and a parasite.

The method of claim 5%, wherein the antigen is a tumor antigen.

67. The method of claim 58, wherein the T cell is contacted with the antigen in vivo.

- 62. (Amended) The method of claim 50, wherein the agent acts intracellularly to stimulate a signal associated with ligation of the cytokine receptor  $\gamma$  chain such that [unresponsiveness by], the T cell is [inhibited] stimulated.
- 63. (Amended) The method of claim 62, wherein the agent acts intracellularly to stimulate phosphorylation of a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecxl sulfate polyacrylamide gel electrophoresis, such that [unresponsiveness by] the T cell is [inhibited] stimulated.

500

BI

- 64. The method of claim 63, wherein the T cell is contacted *in vivo* with the agent.
- 65. The method of claim 63, further comprising contacting the T cell with both an agent which stimulates a primary activation signal in the T cell and an agent which acts intracellularly to stimulate phosphorylation of a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecyl sulfate polyacrylamide gel electrophoresis.
- 66. The method of claim 65, further comprising contacting the T cell with an agent which stimulates a dostimulatory signal in the T cell.
- 67. The method of claim 65, wherein the agent which stimulates a primary activation signal in the Teel is an antigen.
- 68. (Amended) The method of claim 67, wherein the antigen is a pathogen or portion thereof, selected from the group consisting of a virus, a bacteria, and a parasite.
  - 69. The method of claim 67, wherein the antigen is a tumor antigen.
- 70. The method of claim 67, wherein the T cell is contacted with the antigen in vivo.
- 71. (Amended) The method of claim 48, wherein the agent inhibits a signal associated with ligation of the cytokine receptor  $\gamma$  chain, such that [unresponsiveness by the] T cell [is stimulated] unresponsiveness occurs.
- 72. The method of claim 71, wherein the agent acts extracellularly to inhibit delivery of a signal associated with the cytokine receptor  $\gamma$  chain.
- 73. The method of claim 72, wherein the agent binds to the cytokine receptor  $\gamma$  chain without stimulating a signal associated with the cytokine receptor  $\gamma$  chain in the T cell.
  - 74. The method of claim 73, wherein the agent is an anti- $\gamma$  chain antibody.

- 75. The method of claim 72, wherein the agent binds a natural ligand of the cytokine receptor  $\gamma$  chain to inhibit binding of the ligand to the cytokine receptor  $\gamma$  chain.
- 76. The method of claim 75, wherein the agent is selected from the group consisting of an anti-interleukin-2 antibody, an anti-interleukin-4 antibody and an anti-interleukin-7 antibody.
- 77. The method of claim 71, wherein the agent acts intracellularly to inhibit a signal associated with the cytokine receptor  $\gamma$  chain.
- 78. The method of claim 77, wherein the agent inhibits association of the cytokine receptor γ chain with a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecyl sulfate polyacrylamide gel electrophoresis.
- 79. The method of claim 77, wherein the agent inhibits tyrosine phosphorylation of a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecyl sulfate polyagrylamide gel electrophoresis.
- 80. The method of claim 77, wherein the agent inhibits tyrosine phosphorylation of the cytokine receptor  $\gamma$  chain.
- 81. The method of claim 77, wherein the agent inhibits tyrosine phosphorylation of both the cytokine receptor γ chain and a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecyl sulfate polyacrylamide gel electrophoresis.
- 82. The method of claim 71, wherein the T cell is contacted *in vivo* with the agent.
- 83. The method of claim 71, wherein the primary activation signal is delivered by an antigen.
  - 84. The method of claim 83, wherein the antigen is an alloantigen.
  - 85. The method of claim 83, wherein the antigen is an autoantigen.

- 86. The method of claim 83, wherein the T cell is contacted with the antigen and the agent *in vitro* and the method further comprises administering the T cell to a subject.
- 87. The method of claim 86, wherein the antigen is on a surface of an allogeneic or xenogeneic cell and the subject is a recipient of an allogenic or xenogeneic cell.
- 88. The method of claim 86, wherein the subject is suffering from an autoimmune disease or disorder associated with an inappropriate or abnormal immune response.
- 89. The method of claim 71, wherein the T cell is a donor T cell in bone marrow and the primary activation signal is delivered by a cell which expresses a recipient antigen, resulting in donor T cell unresponsiveness to the cell which expresses the recipient antigen and inhibition of graft-versus-host disease in a bone marrow transplant recipient.
  - 90. The method of claim 89, wherein the agent is an anti-γ chain antibody.
- 91. The method of claim 89, wherein the agent binds a natural ligand of the cytokine receptor  $\gamma$  chain to inhibit hinding of the ligand to the cytokine receptor  $\gamma$  chain.
- 92. The method of claim 91, wherein the agent is selected from the group consisting of an anti-interleukin-2 anti-ody, an anti-interleukin-4 anti-ody and an anti-interleukin-7 anti-ody.
- 93. The method of claim 91, wherein the agent inhibits association of the cytokine receptor γ chain with a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecyl sulfate polyacrylamide gel electrophoresis.
- 94. The method of claim 91, wherein the agent inhibits tyrosine phosphorylation of a JAK kinase having a molecular weight of about 116 kD as determined by sodium dodecyl sulfate polyacrylamide gel electrophoresis.
